Question

What is the life time for D.O. probe?

Reply:

Please note that the probe is a consumable item, the lifetime of probe will be affected by several factors including storage conditions, using condition, frequency, correct maintenance (please see maintenance chapter on user manual), and the type of sample measured.

For example, if the probe had been dropped by accident, it could cause the damage internally and shorten the lifetime.

If the probe is used with dirty samples or at high temperature, the lifetime could also be shorten to a few weeks, or days, depends on the real situation.

Nevertheless, AZ offers 6 months warranty on probe, and 1 year warranty on meter if there's any defects in material or workmanship, same as most of other water quality meter suppliers.
